

Endura Flexible Dock Shelter (UNI610CC)

Endura Dock Shelter (UNI610CC) is specially engineered to address the unique challenges at docks that accept standard trailers as well as those with lift gates, step ledges or other rear extensions.

Fast, reliable inflation

Advanced air bag and connector designs reduce bypass so more air stays in the bag while inflating, resulting in faster inflation than other inflatable shelters. Head bag quickly moves into place upon activation, to tightly seal tops of trailers of variable heights and widths.

Most versatile shelter available.

The head bag inflates around the top of the truck after it is backed into place. When not in use the air bag deflates and retracts behind the protective storage curtain (manual activation required).

Engineered for quick, reliable service.

Head and side air bags are inflated with a single phase blower. Air bag and connector are designed for reduced bypass, which results in faster inflation and retraction. The shelter's counterweight retraction system offers less drag, which allows for larger head bag drops.

Dok-Commander® control panel.

Available interconnect system reduces risk of damage if unit not deflated/retracted before trailer pulls in or out.

Dok-Commander control panel (optional).

UNI610CC Dock Shelter

Flexible Dock Shelter (UNI610CC)

Side frames are impactable for long-term durability.

6"-wide (152 mm) side frames allow shelter to fit into narrow spaces.

Removable side curtains allow for maintenance flexibility.

Ultimate durability.

When sealing a variety of trailers that includes liftgates, extending the projection of the unit is only the start. To prevent wear from curtain "backlash" that occurs when standard trailers pull away from the dock, insides of the Shelter side curtains are specially reinforced. Plus, stable narrow side frames provide increased flexibility and further wear protection.

Seals liftgate and step ledge trailers, as well as standard over-the-road trailers.

Ultimate impactability.

Rite-Hite's exclusive poly-wrapped foam side frames provide ultimate impactability – remaining undamaged even after repeated hits by off-center trailers. Side frames can be fully compressed and return to their original shape and position, time after time.

Ultimate flexibility.

Narrow 6"-wide (152 mm) side frames allow shelter to fit into narrow spaces, even at high projections. This can eliminate the need for expensive repositioning of lights, signs and electrical conduit. 11'2" (3404 mm) shelter footprint stays the same, regardless of projection.

Removable, reattachable side curtains.

Easily remove, replace or change out Velcro-attached side curtains for maintenance flexibility.

Guaranteed performance.

Delivers exclusive benefits, and is backed by a standard 36-month money-back customer satisfaction guarantee when ordered with premium Rite-Hite® fabrics.

Advanced draft pad design

Conforming, non-inflatable draft pads reduce risk of damage and leaks, improving effectiveness and reliability of overall seal.

Available PitMaster™ seal

Gaps large and small beneath and around the dock leveler are sealed with optional PitMaster components, providing substantial energy savings, improving cleanliness and sanitation.

PitMaster Under-leveler Seal.
